

OOAD using UML Final Project

The final project will be a group project. A group will be assigned to anybody who is not in a group at that date. The final assignment will utilize material learned throughout the course, so it is recommended that you get an early start on forming your groups, and meeting weekly for this purpose.

The objective of the final project is to provide students with the opportunity to design an information system, which is intended to address a real-world problem. This will involve finding an organization in the community that is willing to allow your team access to participate in interviews and other fact finding techniques, in order to inform the design of an information system that can be particularly applied to address that problem. The system chosen should not be too big or too small; the emphasis on marking will be on the accuracy of the fact finding and the thoroughness of the end product, NOT the size of the system.

The main deliverable for the project will be in the form of a “systems proposal” The nature of the deliverable should be adjusted accordingly, and as relevant to the project.

This SHOULD be the early work performed to support a system that you will actually be developing and implementing during the study of software Engineering.

Some suggestions for suitable projects are:

- A point-of-sales (POS) system
- Inventory System
- Payroll System
- Customer Relations Management System
- Job Tracking System

Components

Deliverable	Description	Example	Mark	Submission Date
System Vision Document		Figure 1-5	5%	30-1-23
Organization Chart	Describe the organization, how it is organized by function. To protect the identity of people, refer to them by anonymous names and list of stakeholders	Figure 2-7	5%	30-1-23
List of Requirements	List of requirements of the system. You should identify the requirement, a description, and the type of requirement (according to the FURBS+ classification).	Na	5%	
Interview Protocols	Describe (at least one) of the methods that you have used to gather data via interviews. Submit this along with your results. Also summarize changes that you will make on the interview questions based on what you have learned	Figure 2-10	5%	
CRUD table	List all entities, CRUDS, and use cases that access each entity	Figure 3-8	5%	
Use Case List (with description AND actors)	List all use cases, and a brief description of each.	Figure 3-10, 3-11	5%	13-2-2023
Use Case Diagrams (By	Should be for each subsystem.	Figure 3-13	5%	13-2-2023

subsystem)				
Use Case Diagrams (by user)	Should be for each actor involved	Figure 3-14	5%	13-2-2023
Class Diagram	Submit one complete class diagram for the project.	Figure 4-21	7%	
Entity List	List each entity used in the class diagram. Include a brief description	Na	5%	
Attribute List	List each attribute used in the class diagram. Sort each attribute by its parent class. Include a brief description	Na	5%	
Use Case Descriptions	Describe each of the use case included in your project	Figure 5-3	8%	
Activity Diagram	Activity diagram for each use case.	Figure 5-4	8%	
Any other documentation as needed?	Other documentation may be needed, depending on the type of project or type of system.		5%	
Challenges	One page discussion on the potential challenges existing that would impact the success of this system.		5%	
First Presentation	Progress report. Describe work completed, and work to be completed. Solicit audience for questions. (10 mins)		2%	
Final Presentation	As above, but the project should be completed at this point. The purpose of this presentation should be to complete final refinements to the project. (20 mins)		10%
